Make Defensible Decisions

COMPAS has many Decision Support Applications:

- ✦ Pre-Trial Release
- ✦ Pre-Sentence Investigation Recommendations
- ✦ Probation/Parole Supervision
- ✦ Prison/Jail Reentry
- ✦ Institutional Treatment and Programming
- ✦ Case Management Plans
- ✦ Work Release Screening
- ✦ Community Corrections
- ✦ Early Release Screening for Crowding Control

Fully web-based and Windows compliant COMPAS is applicable to offenders at all levels from non-violent misdemeanors to repeat violent felons. COMPAS offers separate norms for males, females, community and incarcerated populations.

COMPAS MAIN RISK & NEEDS REPORT WITH OVERLAY

OFFENDER ASSESSMENT & CASE PLAN HISTORIES

All offender assessments and case plans are stored under a master offender identifier for easy access and review of previous assessment results and case plan progress. Static data from the most recent previous assessment is carried forward in the new assessment to minimize redundant data entry and assessment administration time. View previous case plans and outcomes to build on prior progress and learn from previous failures.

FULLY SCALABLE

COMPAS allows you to easily select ANY combination of its risk and needs scales to most effectively and efficiently inform your decision support needs across the offender processing continuum. After selecting your scale combinations COMPAS saves them as custom "scale sets" for repeated use in the assessment wizard. The main COMPAS Bar Chart Report visually compares your offender against all other offenders in the norm group. COMPAS allows for the reassessment of the offender over time and allows the user to "overlay" the current assessment chart over any previous assessment to visually compare dynamic changes in risk and need over time.

CASE PLAN WIZARD SCREEN

COMPAS CORE Case Plan

- Social Isolation : Highly Probable [8]
- Substance Abuse : Highly Probable [8]
- Decrease Substance Abuse and Increase Positive Coping Skills
- Develop and discuss Relapse Prevention Plan

INTEGRATED CASE PLANNING

COMPAS includes an integrated case planning module that provides a template automatically populated with the offender's assessed needs results. Easy to use drop downs of "user configured" goals, tasks and activities tied to each need allows the user to build, and update over time, a custom case plan for each offender. The case plan also allows for the tracking of individual task referral, start and termination dates, termination reasons, service providers and other case outcomes.

ON-BOARD USER GUIDES

COMPAS automatically assists the user in navigating the software with intuitive navigation wizards. Data edit checks help assure consistent question responses. COMPAS includes both an Inconsistent and Random Response Test to help identify questionable offender self report responses. Complete on-board help guides and user manuals provide finger tip access to question definitions, software navigation and decision support.

Break the cycle. Create solutions. Transform lives.
